

COX POND
South Berwick Twp., York Co.
U.S.G.S. Dover, N. H. - Me.

Fishes

Yellow perch	Minnows
Chain pickerel	Golden shiner
Hornpout (bullhead)	Pumpkinseed sunfish

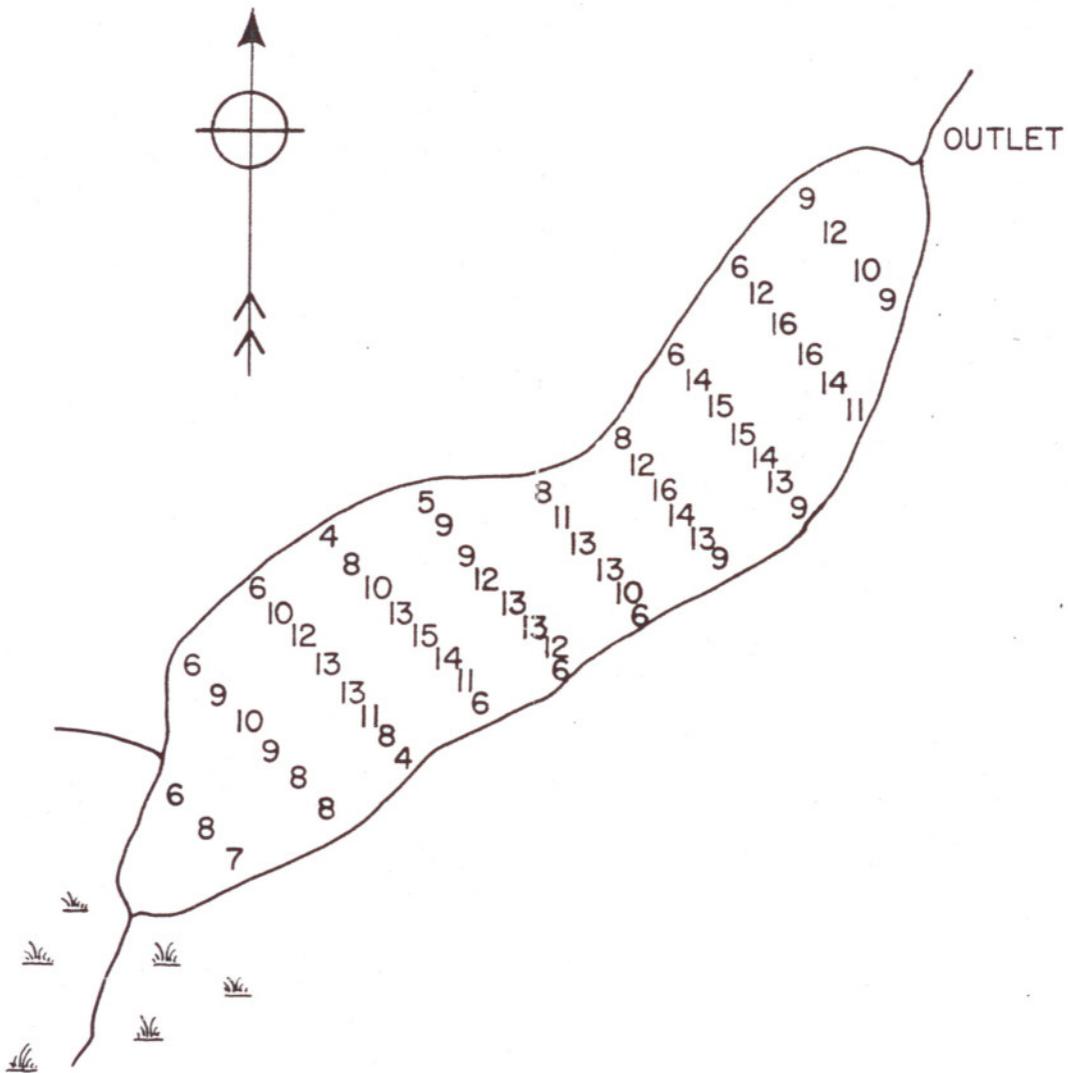

Physical Characteristics

Area - 7 acres	Temperatures
	Surface - 76° F.
Maximum depth - 16 feet	16 feet - 55° F.

Cox Pond is a small warmwater pond well-suited for the pickerel, perch, and hornpout already present.

A small volume of cold water below 10 feet lacks the necessary oxygen to support a trout population. Heavy competition from warmwater fishes also rules out the possibility of establishing a population of trout.

It is recommended that Cox Pond be managed for pickerel, perch, and hornpout.
